

ABSTRACT

Alfa interferon ( $\alpha$ -IFN or alpha-interferon) and liposomal all-trans  
retinoic acid is useful in cancer treatment with particular reference to renal  
5 cancer. Optionally, a regimen of  $\alpha$ -interferon from about 3 to about 5 million  
units sc daily and liposomal all-trans retinoic acid at from about 15 mg/m<sup>2</sup> to  
about 90mg/m<sup>2</sup>, or about 140mg/m<sup>2</sup>, or about 300mg/m<sup>2</sup> or more. Dosage  
periodicity of about three times per week for both drugs in about 8 week  
cycles is useful.
